## Secure citizen identities and expand usages experience

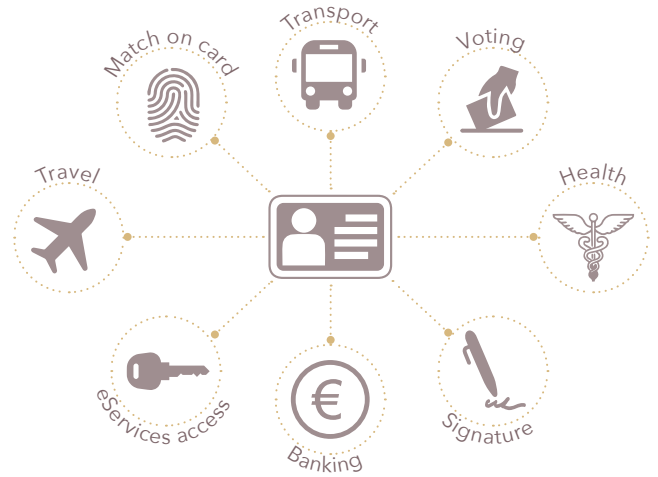

### IN|DOCUMENT Multiapp ID

IN Groupe's solution enables governments to enhance face-to-face identity control while increasing the usages and the services for citizens.

**THE RIGHT  
TO BE  
YOU**

# Toward Multiapp ID

More and more states issue identity cards in order to provide services to their citizens via the integration of several functionalities as travel, health, transport, voting or banking. Consequently, the convergence of different uses related to identity cards involves ensuring an optimal level of control for governments while increasing distant services for citizens.

## How to secure face-to-face identity control?

### Document fraud analysis

Confidential consultancy services based on our experience with worldwide experts in the fight against forgery.

### IN Studio

Accompany each state in defining its needs through a series of workshops (about usage, security features and art design).

### Best of breed security features

Optimal combination of security features and integration of the best non-proprietary technologies (Transparent/Translucent borders, Dynamic MLI, CAI®, CMI®).

### Highly secured production site

ISO 14298 relative to the management of security printing processes; biometrics access control (security clearance); own security teams 24/7/365; direct connection with police.

## How to provide access to digital services?

### Identification & Authentication

Identification of the holder and/or authentication (via electronic certificate) allow citizens to have a secure and distant access to services.

### Signature

The digital signature validates the integrity of the data to prove that this information has not been tampered.

### Citizen inclusion

To ensure extended use of the document by the citizen, the IAS functionalities are adopted to both ID cards and mobile ID (see our Mobile ID brochure).

# Multiapp ID by IN Groupe

IN Groupe provides state authorities with a comprehensive solution to manage all operations related to the successful delivery of multiapplicative cards and the optimal usage for citizens. From document production and personalization to post issuance management, we offer products, components and services to accompany our clients in their path toward secure and convenient documents.

## 1 Usage analysis and co-conception (IN Studio)

- Analysis of the cards usage and definition of integrated functionalities in the card (travel, health, voting, transport, banking)
- Specification of the most suitable physical characteristics (security features) and electronics (chip & OS) according to the usage of the document
- Creation of security design and data layout

## 2 Cards production and personalization

- Printing, assembling and merging of the card's layers
- Reception of holder's files
- Graphical and electronic personalization
- Quality control at each stage of the industrial process
- Secure transport, security stock

## 3 Knowledge transfer

- Training of civil servants to support citizens
- Document fraud training for control forces
- Communication tools to improve citizen awareness

## 4 Multiapp ID post issuance management

- Update of citizens data
- Electronic certificates update
- Integration of additional functionalities in the document
